

Electronic Content Delivery Statements^e

Online Statement Presentation

Statements^e

MSI Statements^e is a 5th generation, highly interactive electronic representation of the traditional paper financial statement. With MSI's patent-pending Adobe Flash™ user interface, the financial institution customer is presented with a fluid, dynamic, and highly interactive statement viewing experience.

While most electronic bank statement solutions require the customer to load and launch a separate PDF viewer, then wait for the statement to load, MSI's statements are instantaneous, embedded directly into the web pages. This makes for a unique, unparalleled viewing experience that has to be seen first-hand to be fully appreciated.

Statements, Notices and Checks Online

Data is stored encrypted in a hardened and secure website delivered and translated over the internet via 128-bit encryption. Statements are fully text-searchable, can be downloaded, and can contain both hypertext links to individual check images as well as check image pages matching exactly the hardcopy version.

One to One Marketing Opportunities

Reach your customer on a one to one basis. Use personalized marketing material via HTML e-mail notifications as well as statement marketing messages.

Cost Saving Opportunities

Reduce costs 30% or more from existing USPS mailing. Utilizing MSI's advanced internet technology services can help your organization gain technology that would otherwise be costly and time consuming.

Multimedia Delivery Options

We offer seamless integration with single-sign-on from your existing online banking application or website. Presentation on wireless products such as PDAs is with full fidelity to the original, and does not mean sacrificing content or response time.

Statements^e

Key Capabilities and Benefits

- Patent-pending Flash user interface creates a fluid, highly interactive statement viewing experience, without launching of separate PDF viewers.
- No hardware or software to buy. Operates as an online, Software as a Service (SaaS) application over the Internet.
