# Branch Capture

MSI Checks<sup>®</sup> Web Enabled Branch Capture Solution

## “Branch Capture, No paper...none...nada”

### ■ Web Enabled

Goodbye installed applications and server cost. That means immediate savings ranging from the installation cost to the day to day cost associated with maintaining servers. The Checks<sup>®</sup> solution is completely operated from an internet browser.

### ■ No Paper...None...Nada

The MSI Checks<sup>®</sup> Branch Capture can finally set you free from paper handling, sorting and transporting physical items. All transactions are handled digitally including capture, presentment and returns. There is absolutely no physical item exchange or sorting after the actual capture of the item.

### ■ Full POD

This web enabled system is a fully functional POD product. Intuitive reject/re-entry, CAR / LAR and all other POD features are available and of course, web enabled. MSI also offers 'item key' services if you are in a pinch or just needing additional resources.

### ■ IRD Production

Creating IRDs and delivering them in a timely manner is not a problem any more. MSI can demographically expedite IRD production nationally to speed up the delivery time.

### ■ Full Image Exchange

Checks<sup>®</sup> is a true Check 21 system because it only utilizes digital means of transporting items. Many financial institutions are still holding on to sorters because they do not have a means to change. MSI Checks<sup>®</sup> makes it possible to make that jump.
